

# Case Study

## Name:

Annette Donnelly

## Occupation:

Sister - Renal Unit

## Royal Shrewsbury Hospitals

My daily duties involve the day to day running of a very busy Renal Unit. This includes dealing with patients including needling and the running of lines as well as the everyday management of issues within the department.

## How did you found out about The Bambach Saddle Seat?

I was having some musculoskeletal issues and asked my manager to look into alternative seating solutions.

## What made you try the Bambach?

My Manager approached the Manual Handling Department within the trust who recommended that we trial a Bambach Saddle Seat for a month.

## Has using the Bambach addressed the problems you wanted to overcome?

Previous to trying the Bambach I had been suffering with both knee and back pain and had also needed bilateral ulnar nerve surgery which meant that I was also getting elbow problems in work. This was particularly the case when spending longer periods sitting with patients who were at risk of bleeding and bending to treat patients with leg grafts. Since using the Bambach I no longer have any back or joint problems, which is great!

## Comments

I have now been using the Bambach for about six years and I feel that it makes everything so much easier. When my back is playing up I know that sitting on the Bambach will help to realign me!

## Would you recommend The Bambach Saddle Seat to fellow professionals?

I would definitely recommend the Bambach to other Professionals. I only wish I could take mine home with me!
